

Cybersecurity

The Master of Science in Cybersecurity is an interdisciplinary program offered by the departments of Computer Science (CSC) and Electrical and Computer Engineering (ECE) that will train the next generation of professionals for careers in industry, government, and academia to safeguard our society and our world. The program will provide students with the latest technical knowledge and skills in cybersecurity and privacy principles and the engineering aspects of software and hardware security to build secure systems that are resistant to attack. Vulnerabilities can enable cyber attacks that could lead to critical disruptions in telecommunications, banking, utilities, data storage, transportation, and more. The program will contribute to the economic development of North Carolina by providing a pipeline of experienced cybersecurity-trained professionals to support the development of technology solutions across a range of industries.
