

# Electrical Engineering (BS): Biomedical Instrumentation Concentration

The EE core courses provide a foundation for all EE students in electric circuits, digital logic, computer systems, programming, signals, linear systems, microelectronics, electromagnetics, teaming and communication, and the social and ethical dimensions of the practice of electrical and computer engineering.

EE offers a robust set of concentrations to guide students in their studies. All concentrations within EE share the core courses required by the major. Concentrations are offered in the following areas: Analog Circuits, Artificial Intelligence and Machine Learning, Biomedical Instrumentation, Communications and Signal Processing, Controls and Robotics, Digital Circuits, Electronic Devices, Music Technology, Optics and Photonics, Power Systems, and Radio Frequency Circuits.

Each EE concentration contains 24 hours of work. Students will take 12 hours from a prescribed list of courses that provide the necessary depth and background to pursue a career in the area. An additional 12 hours from a broader list of "open" electives are also required as part of the concentration, and these are meant to reinforce and add breadth to that area. There are many connections between areas and too many to explicitly list, and therefore, the open category gives students the freedom to choose courses that either broaden or deepen their expertise as they determine appropriate in consultation with their advisor. Furthermore, the open elective list intentionally allows students to take courses outside of ECE, such as other engineering, math, or science courses.

In their final year, all Electrical Engineering majors participate in a two-semester senior design course sequence. Students work in teams to solve an engineering problem identified by faculty or industrial sponsors. Over the course of two semesters, students gain experience designing, documenting, and communicating about their project to various audiences.

This curriculum leads to a Bachelor of Science in Electrical Engineering and is nationally accredited by ABET, <http://www.abet.org>.

The Biomedical Instrumentation concentration prepares students for the design of computer and electrical systems for use in biomedical applications. The required courses focus on wearable biosensors and microsystems and embedded systems architecture. Electives in this concentration emphasize deeper knowledge in electronics, custom hardware design, nanomanufacturing techniques and applications, neural interface engineering, and medical instrumentation.

<sup>1</sup> Course required for Change of Degree Audit (CODA).

<sup>2</sup> A grade of C or higher is required.

<sup>3</sup> A grade of C- or higher is required.

<sup>4</sup> A grade of C- or higher is required.

<sup>5</sup> Suggested open electives include: Electronics: 403, 442, 468/568, 505, 522. Power systems: ECE 434, 452, 453; Communications and Signal Processing: ECE 410/510; Machine Learning and AI: ECE 411, 425/525; Embedded Systems: ECE 306, 460, 560. With permission of the other departments, we also recommend: MAE 420/MAE 520, BIT 476 Applied Bioinformatics, BME 463.
